

Summary of Installation Activities: 3/2/2006

1. I talked to Norm Buchanan about the dead Trigger Towers (TT) and problematic BLS lines. There is no dead TT's. If we see problems with any BLS lines on patch panel end with the pulser test, Norm will check the other end (cards, etc) and the special data to determine where the problem is.
2. With help from Linda Bagby, I am about to upload (tomorrow if not today) the daily summaries to the Web. I will also learn how to put them in online logbook.
3. Test activities at Sidewalk continued. Mike has been trying every link in the system with success.
